

IWETH

Methods

allowance

```
function allowance(address owner, address spender) external view returns (uint256)
```

Parameters

Name	Type	Description
owner	address	undefined
spender	address	undefined

Returns

Name	Type	Description
_0	uint256	undefined

approve

```
function approve(address spender, uint256 amount) external nonpayable returns (bool)
```

Parameters

Name	Type	Description
spender	address	undefined
amount	uint256	undefined

Returns

Name	Type	Description
_0	bool	undefined

balanceOf

```
function balanceOf(address account) external view returns (uint256)
```

Parameters

Name	Type	Description
account	address	undefined

Returns

Name	Type	Description
_0	uint256	undefined

decimals

```
function decimals() external view returns (uint256)
```

Returns

Name	Type	Description
_0	uint256	undefined

deposit

```
function deposit() external payable
```

transfer

```
function transfer(address recipient, uint256 amount) external nonpayable returns (bool)
```

Parameters

Name	Type	Description
recipient	address	undefined
amount	uint256	undefined

Returns

Name	Type	Description
_0	bool	undefined

transferFrom

```
function transferFrom(address sender, address recipient, uint256 amount) external nonpay
```

Parameters

Name	Type	Description
sender	address	undefined
recipient	address	undefined
amount	uint256	undefined

Returns

Name	Type	Description
_0	bool	undefined

withdraw

```
function withdraw(uint256) external nonpayable
```

Parameters

Name	Type	Description
_0	uint256	undefined
